

Centre of excellence for immersive tech

Pune: A centre of excellence (CoE) for development and research in immersive technologies, such as augmented and virtual reality, has been established at the Vishwakarma University in association with Unity Technologies.

Through this CoE, the students will get hands-on experience in using these technologies in varied domains, including entertainment, management, tra-

vel, tourism and architecture, among others.

Unity Technologies is a real-time engine that is used to create videogames. A statement issued by the university said the centre would offer an interactive design and development experience and two-and three-dimension engineering. Experts from Unity would guide the students and the faculty members of Vishwakarma University. TNN
